Exposure Scenarios for extended SDS

Gillies Associates Limited works in partnership with specialist REACH consultancy *Chemsage Limited* to assist clients with all aspects of REACH compliance.

REACH requires suppliers of substances or mixtures classified as dangerous to produce extended Safety Data Sheets (eSDS) with Exposure Scenarios (ES) covering all the intended uses of the product. The eSDS, including ES, must be supplied in the language of the EU country where the product is sold.

Chemsage Ltd. has developed its own Tier 1 assessment tools using the same assessment approach as the ECETOC TRA tool to assist in the preparation of exposure assessments for Chemical Safety Reports and to produce concise, but easily understandable Exposure Scenarios (ES) for extended Safety Data Sheets. The tool can be used to create ES from scratch or to retrofit ES taken from Chemical Safety Reports. The tool will automatically generate translations of the ES for eSDS into ten of the main European languages.

Working with your in-house team members we customise our services to the requirements of each individual client to make sure you receive the most appropriate and cost-effective support for your needs. The tool is designed to be flexible and give a tailored output to suit individual client needs.

Gillies Associates Limited is an approved service provider under the UK Chemical Industries Association REACHReady scheme (<http://www.reachready.co.uk>)

Advantages of using the Chemsage ES tool

- Consistency of Exposure Scenarios between CSR and eSDS
- User-friendly and concise ES for eSDS in ECHA-preferred format
- Uses standard ESCOM phrases wherever possible
- Automated translation of ES into ten* European languages
